Brandi Cossairt named newest Associate Editor of Inorganic Chemistry

Submitted by Kimberly Quigley on November 1, 2017 - 12:53pm

Assistant Professor Brandi Cossairt was announced as the newest Associate Editor of the American Chemical Society journal Inorganic Chemistry. Her appointment to the journal’s editorial board will begin January 1, 2018.

The announcement via the ACS Axial blog regarding the appointment of Professor Cossairt and two others to the journal's editorial board included thoughts from Inorganic Chemistry Editor-in-Chief William B. Tolman about what each appointee would add to the journal.

“Brandi Cossairt brings new expertise in inorganic materials chemistry to the Associate Editor team. As an early-career investigator, Brandi has established herself as an outstanding leader in the field, whose work focuses on phosphide and arsenide colloidal nanoclusters, quantum dots, and other materials, as well as on the development of bimetallic catalysts for small molecule conversions,” Tolman says. “Also notable is her additional background in main-group small-molecule chemistry. Importantly, Brandi will play a key role in handling the growing number of submissions to Inorganic Chemistry focused on inorganic materials and nanochemistry.”

See the ACS Axial announcement for more information, including Professor Cossairt's thoughts on her research, challenges in the field of inorganic chemistry, her goals for this new role, and more.
